New agreement between ESTRO and EADO on future collaborations

We are happy to announce that ESTRO and the [European Association of Dermato-Oncology](#) (EADO) have finalised a memorandum of understanding (MoU) to strengthen their joint efforts to promote effective cancer care.

This MoU serves as the underpinning for a continuous exchange between the two organisations, with a particular focus on:

- the development of joint guidelines and the promotion of guidelines published by each organisation
- the design of collaborative courses; and
- the organisation of joint symposia during the societies' annual congresses.

This MoU marks an important step in the collaboration between ESTRO and EADO, which has already produced excellent results in the interdisciplinary treatment of dermato-oncological diseases.
